THANK YOU

Black Rock Utilities (BRU) appreciates your assistance in ensuring adequate design, distribution, and uniformity of irrigation, drinking water, and wastewater systems.

In order to properly plan, protect, and provide the best water quality and waste disposal, BRU needs accurate and clear data on all of the items in the Wet Utility Application.

The information you provide ensures compliance with various Idaho Department of Environmental Quality (IDEQ) standards for water and wastewater system design. Additionally, it secures quality services for current and future residents.
